Notes from Team Meetings

These are screenshots and info about our Discord group chat that we have used as the main way to communicate with each other. Max is Max Bergam, Eric is Eric Adams, Shu is Khanh Luu, and tnguyen72 is Tam Nguyen.

INFO:

Total message count: 7,408

We made our discord group chat on January 22, 2020 and this has been our main way of communicating throughout the whole project. We used it to discuss our plans, ask questions, and talk about anything related to the project. We talked in it everyday throughout these last two quarters. Whenever anyone finished something, updated GitHub, or submitted a report, we all did a good job of communicating that to the team so that we were all on the same page. I (Max) as team lead made sure to link in the Discord chat all reports that I compiled and submitted to Canvas throughout the project so that everyone in the group could look at them and have a copy of them.
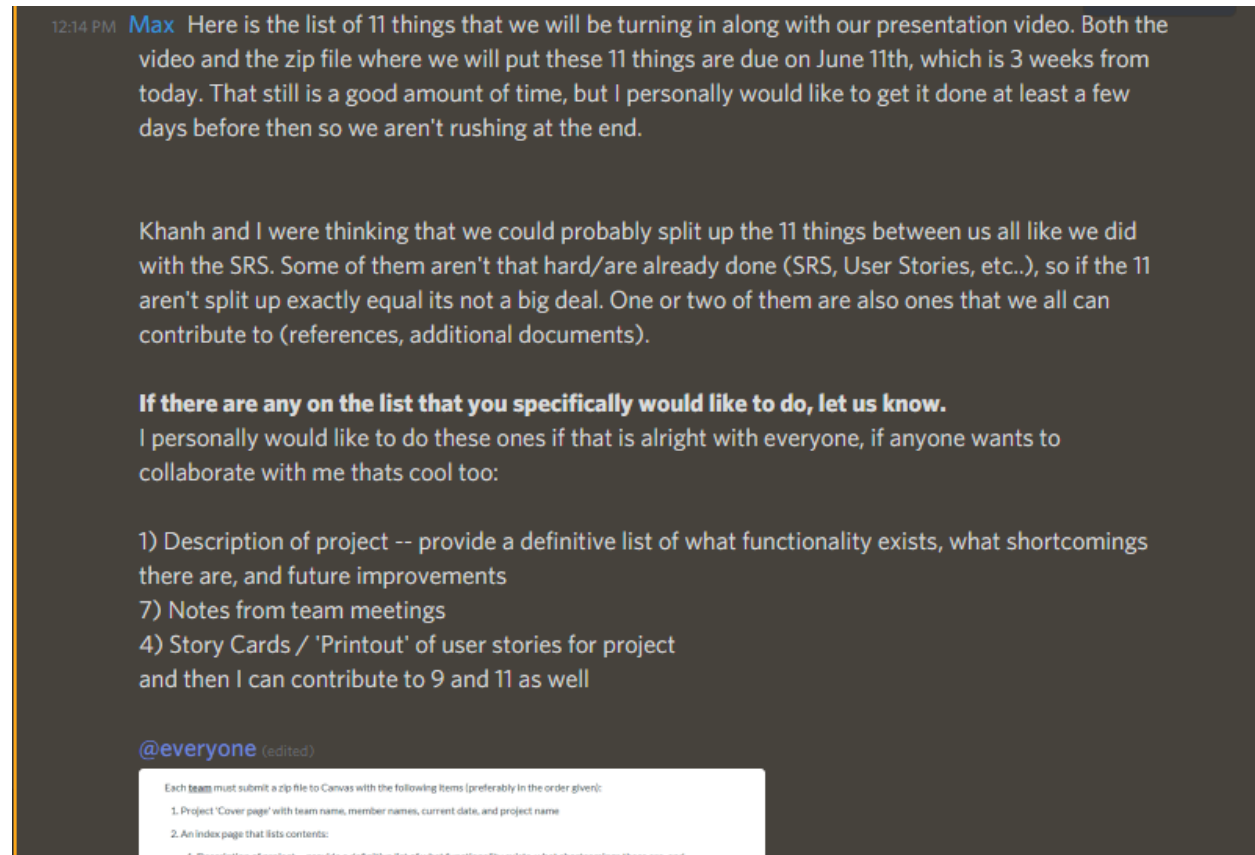

Starting in spring quarter when we were no longer able to meet in person, we began to have team voice meetings every so often. We had these meetings mainly to discuss issues we were having with code, GitHub, or to get everyone on the same page with what we were all working on. Every meeting we had was productive and everyone in the group was present and active anytime we scheduled a group voice meeting. I (Max) took notes during our meetings based on what we talked about. Below I will attach a few screenshots of notes from those meetings.

These are notes I made from a voice meeting we had on May 10th where we all went over our project looking for bugs and explaining different features that we each worked on to each other

11:36 AM **Max** Notes from meeting/things to fix 5/10/20:

-disable allowing to scrolling when on the create event pop up (**Tam**) @Tam

-when editing an event, change the event time to am and pm time (we can keep it 24 hr time in the code and database behind the scenes) (**Eric**) @Eric

-Fix header CSS (**Tam :D**) @Tam

-fix CSS 'See Events" popup, marker popup CSS (**Tam**) @Tam

-add jpg files to siteground for sports we dont have/fix code to make sure the code access the files with lowercase letter (ex: baseball.jpg and not Baseball.jpg)

-fix search algorithm to show more accurate results (**Max and Eric**) @Max @Eric

-when you cancel an event in upcoming events, it sometimes will delete the wrong event (**Tam**) @Tam

- ~~after you delete an event, and you go back to the map, the marker will still be blue and that event you just deleted will still be visible~~ dont think this is an issue after i do the thing below

-Dont add the creator as a user to an event @Max

-add email notifications (@Tam)

-add ability to change bio on your account (@Khanh)

-change text on search bar to "Search for people" @Khanh

-when you click join event, it takes you to my evetns, but you have to refresh the page for that event u just joined to show up. Make sure that after u click join event and it takes you to my events page it will refresh automatically

-move about us to a new page, and link it at the bottom of the home page (@Tam)

-update upcoming events section with actual real upcoming events and not hardcoded ones @Tam

-Specify what each line is on the event detail page (Title: Type of Sport:) @Tam

-fix issue when u upload a new profile picture, delete the old profile picture @Khanh (edited)

Max -make submitEvent.php code more secure @Max (edited)

Here is a screenshot of a message I (Max) sent the group about the final deliverables after Khanh and I talked in the voice chat a little bit about it

12:14 PM Max Here is the list of 11 things that we will be turning in along with our presentation video. Both the video and the zip file where we will put these 11 things are due on June 11th, which is 3 weeks from today. That still is a good amount of time, but I personally would like to get it done at least a few days before then so we aren't rushing at the end.

Khanh and I were thinking that we could probably split up the 11 things between us all like we did with the SRS. Some of them aren't that hard/are already done (SRS, User Stories, etc..), so if the 11 aren't split up exactly equal its not a big deal. One or two of them are also ones that we all can contribute to (references, additional documents).

If there are any on the list that you specifically would like to do, let us know.
I personally would like to do these ones if that is alright with everyone, if anyone wants to collaborate with me thats cool too:

1) Description of project -- provide a definitive list of what functionality exists, what shortcomings there are, and future improvements
7) Notes from team meetings
4) Story Cards / 'Printout' of user stories for project
and then I can contribute to 9 and 11 as well

@everyone (edited)

Here is a screenshot of notes from our most recent team meeting where we went over what we each were doing and wanted to do over the last couple weeks

7:46 PM Max Things to do next week + notes:

-Im going to email Tom for clarification on 5, 6, 3, and 8 on the final deliverables @Max

-change file names to same name setup. Ex: upcoming-events.php (all lowercase, - between words) @Khanh

-make sure sql file on github is all up to date (@Max)

-final deliverables:
- @Max Max: 1, 4, 7
- @Khanh Khanh: 2, 10
- @Eric Eric: 6, 3
- @Tam Tam:
-All together: 5, 9, 11, 8

- talk about what parts of 8 we want to do tomorrow

-Order for final presentation: @Max, @Eric , @Tam , @Khanh (edited)
